PERSONAL PROJECTS

CryptoCompare

- [Website](#)
- [Source Code](#)
- Application fetches market and coin data from free coingecko API.
- Users can compare different cryptocurrencies to one another in historical price data, market cap etc.
- Authenticated Users can create a portfolio to view their tokens.
- Wrote automated tests with React Testing Library.
- Built using Typescript, Javascript, Next.js, styled components and Supabase.

TagMyTunes

- [Website](#)
- [Source Code](#)
- Users can upload up to 100 mp3 files which have artist and track names in the file name (common occurrence when downloading from certain websites).
- The application will replace this long string from the file name into the correct ID3 tags in file metadata (artist and song title).
- Users can also remove unwanted strings from file name.
- Built using Javascript, React, Node, Express and Bootstrap.

BugTracker

- [Website](#)
- [Source Code](#)
- Full JWT authentication through team and user portals with access and refresh tokens.
- Users create teams and subsequent team members to create tickets for feature and bugs in their respective projects.
- Built using Javascript, React, Node, Express and Sass.

Battleship Game

- [Website](#)
- [Source Code](#)
- Users can battle against a programmed bot in a web based game of the popular board game Battleship.
- Built using HTML Canvas elements, vanilla Javascript and CSS.

Mixin

- [Website](#)
- [Source Code](#)
- Web application that utilises the cocktailDB api to display cocktail information for the end user depending on preferences.
- Users can input ingredients and receive a list of cocktails which can be made with said ingredients or for which they are missing certain ingredients for.
- Built with vanilla Javascript, HTML, Node, Express and Sass.
